RE: Ram Snap Fill Cell Cover Plate Tie Down System

Dear Mr. Alesi:

Our office has reviewed the design specifications and installation instructions for the CMU fill cell cover plate. This system adequately performs as designed and has no adverse affect on the structural integrity of the concrete filled cell at the base. This system is preferable over pneumatic nailing of wood cover plates since nailing pits the face and the inside of the CMU.

Please call our office if we can be of further assistance.

Sincerely,  
American Civil Engineering Company

John H. Herbert, P.E.
